

Chicago Dermatological Society NEWSLETTER

FALL 1997
VOL. VII, ISSUE 1

OFFICERS 1997-1998

Bruce Bennin, M.D. *President*
Kathleen Remlinger, M.D. *President-Elect*
Anne Laumann, M.D. *Vice-President*
David Lorber, M.D. *Secretary*
Kathleen Remlinger, M.D. *Treasurer*

Editor's Message:

I have always had an interest in the history of dermatology, especially in Chicago. In this issue, we are featuring a giant from the past: William Allen Pusey, M.D. He was one of the founders of our Society, the first editor of the *Archives of Dermatology*, and the only dermatologist to be president of the American Medical Association. Future issues will continue to feature famous dermatologists from the CDS archives as well as those honored by named lectureships.

Mark D. Gendleman, M.D.

The President

I was born in Chicago and grew up on Chicago's north side. I graduated from Senn High School, attended Northwestern University, Bradley University, and The Chicago Medical School. I was an intern at Michael Reese Hospital where one of my rotations was with Dr. David Fretzin. Although I was not anticipating a career in dermatology (as my efforts probably reflected), I appreciated Dr. Fretzin's knowledge and enthusiasm for the specialty and his energetic persona. After an internship in internal medicine, I was undecided as to what to do next, so I took a year to evaluate my options. ("Evaluate my options" is a neo-euphemism of the nineties.) I really was confused and didn't know what I wanted to do.

I spent that year enjoying a delayed honeymoon (I started my internship the day after my wedding so we hadn't had one) and then working at the 26th Street Venereal Disease Clinic. There were four dermatologists working there, among them Dr. Louise Tavs. Dr. Tavs was a nationally renowned dermatologist and venereologist and had practiced for many years in Chicago. She was an exceptional and extraordinary individual. She found every medical encounter fascinating, and her animated enthusiasm was contagious. Every case was a medical mystery, and she found something fascinating even in what was the most common and routine case. I could write a book about my experiences that year. It not only gave me entree into dermatology, through her recommendations, but gave me the skills to set up the Uptown Venereal Disease Clinic, where I worked on Saturdays during my residency for fun and extra money to support my growing family.

I was fortunate to secure a dermatology residency at Cook County Hospital, where, like Dr. Tavs and Dr. Fretzin, Dr. Sidney Barsky had that "joie de derm." Dr. Barsky to this day can look at even normal skin and find something unique and interesting about it. In addition, I had the bonus of attending the University of Illinois staff meetings and various lectures. I witnessed the sardonic and reflective aspects of the brilliant Dr. Adolf Rostenberg and the scholarly and uniquely communicative gifts of Dr. Larry Solomon. Dr. Solomon could probably give a lecture "quantum mechanics for dummies" and have everyone believe they thoroughly understand it. Added to all this were the Chicago Dermatological Society meetings which gave me monthly contact with many of the knowledgeable and experienced dermatologists in Chicago and the Midwest.

After completing my residency, I connected with Dr. Burton Silver, joining his practice in Deerfield, IL. The practice has grown over 20 years to include Dr. Anne Bronner, Dr. Peter Hallarman

continued on page 6

The Annual Two Day Meeting

The Chicago Dermatological Society in conjunction with the Illinois Dermatological Society hosted its annual two-day weekend meeting on Saturday, Oct. 4, and Sunday, Oct. 5. The theme was Practical Dermatologic Therapeutics: Progress, Pearls, and Pitfalls. The meeting was held at Rush Medical Center and was attended by about 100 dermatologists. On Saturday the cases were presented along with a lecture by James Krueger, M.D.

Dr. Krueger discussed his research at the Rockefeller Institute and Rockefeller University Medical Center, where he is Laboratory Head and Medical Director. His work on the pathogenesis of psoriasis as a model of immunologic disease was extremely interesting. The lecture was *Therapy of Psoriasis with Engineered Immunologic Agents Including Fusion Toxins and Some Newer Agents*. The lecture described his work showing the pathogenesis of psoriasis to be more likely immunologically mediated, while the epidermal proliferation to be secondary. Because of this, many steps in the inflammatory process provide potential therapeutic opportunities. He discussed the areas where many of the current therapeutic agents act and some experimental drugs he is studying.

On Sunday three lectures were presented:

Beyond Griseofulvin: Use of New Antifungal Agents by Theodore Rosen, M.D. In his lecture Dr. Rosen reviewed some of the topical and systematic antifungal agents and gave us an oyster bed of pearls. Some of the pearls were: using sulfodex pet shampoo to treat infected pets, saving an expensive trip to the vet; that Loprox, Naftin, and Lamisil had more anti-inflammatory properties than other topical antifungals; and in the treatment of tinea versicolor, have patients take 2 Nizoral tablets and work up a sweat two hours thereafter to get maximum benefit. Many more pearls are in the handout he is mailing to the CDS. Copies will be available at the next meeting.

How to Avoid Major Complications from Systemic Corticosteroids by Stephen Wolverton, M.D. Dr. Wolverton gave practical guidelines and caveats on the use of systemic steroids. He gave 12 rules to follow to avoid complications of systemic corticosteroids. Highlights included the ranking of adverse effects with the greatest consequences to the patient. These may be less common and insidious but should be kept in mind. They were: (1) effects on bone, including osteonecrosis and osteoporosis; (2) the "metabolic trio" hyperglycemia, hypertension, and hyperlipidemia; and (3) HPA axis suppression. Next, he gave a list of symptoms that patients should be aware of so they can report them to the physician. Finally, one should understand and explain to patients that complete disease control may require an unacceptable amount of drug and that less than complete control often be accepted and appreciated by the patient and the physician, in order to minimize adverse side effects.

Dermatologic Uses of Cyclosporine and Tacrolimus by Virginia Fiedler, M.D. Dr. Fiedler discussed her work with Tacrolimus (FK506). The use in many patients with atopic dermatitis was beneficial and very safe, but long lasting effects were not achieved once the drug was discontinued. Its therapeutic niche remains uncertain.

Dr. Tharp, his staff, and his residents did a tremendous job in hosting and organizing the meeting. Special thanks is due to Joan Phillips for her work on the meeting.

Bruce Bennin, M.D.

RESIDENTS' CORNER

WHERE ARE THEY NOW?

Cook County Hospital

Anya Landeck, M.D. is doing a Moh's Surgery Fellowship at the University of Wisconsin, Madison, Wisconsin.

Rachel Schacht, M.D. is in private practice at Barsky Dermatologic Associates, Oak Brook, IL.

Northwestern University

Stephanie Cotell, M.D. is practicing with a multi-speciality group in Chicago, Illinois.

Bari Cunningham, M.D. is now residing in San Diego, California, and practicing pediatric dermatology at the University of California San Diego.

Ken Gordon, M.D. is an assistant professor of dermatology at Northwestern University Medical School and chief of the dermatology service at Lakeside V.A. Hospital.

Karin Linthicum, M.D. is in private practice in North Carolina.

Farhad Shahandeh, M.D. is in practice with Kaiser multispecialty group in San Diego, California.

Rush-Presbyterian-St. Luke's Medical Center

Kelly Abate, M.D. is in private practice in Wheaton, Illinois.

University of Chicago

Hai Tran, M.D. is currently a cosmetic surgery fellow in southern California.

Lisa Turner, M.D. is in private practice with a multispecialty group located in north suburban Chicago.

University of Illinois

Thomas Brander, M.D. is in private practice in Bloomington-Normal, Illinois.

Patricia A. Carroll, M.D. is in private practice in Phoenix, Arizona.

Paul Storrs, M.D. accepted a position as Assistant Professor of Clinical Dermatology at the University of Illinois Dermatology Department, Chicago, IL.

Libbyette Wright, M.D. is pursuing a dermatology surgical fellowship at the University of Pennsylvania

NEW RESIDENTS

Cook County Hospital

Christina Gutierrez-Steil, M.D. graduated from Washington University in St. Louis in biochemistry. She attended the University of Chicago Pritzker School of Medicine, and completed her medicine internship at Loyola Medical Center. She most recently spent a year doing skin research with Brian Nickoloff, M.D. at Loyola University's Cancer Center. Christina lives in Hinsdale IL with her husband Greg Steil and son Anthony.

Lisa Catherine Sarah Kates, M.D., MAHP, was raised in Philadelphia, PA and received a B.S. from Ursinus College in Pennsylvania. She received her Masters in Human Physiology and her M.D. from Hahnemann University. She completed an obstetrics and gynecology internship and a medical internship at the University of Maryland in Baltimore, Maryland.

Suseela Vallurupalli, M.D. was raised in St. Louis, MO, and received her B.A. from Princeton University in molecular biology. She received her M.D. from Albert Einstein College of Medicine and then completed a medical internship at Washington University Medical Center in St Louis.

Northwestern University

Claudia Hernandez, M.D. was born in Chicago, Illinois. After graduating from high school in South Holland, Illinois, she majored in biological science at the University of Chicago. She received her M.D. from Northwestern University Medical School and then completed her internship at the University of Chicago.

Tomi Pandolfino, M.D. was born in Tokyo, Japan. She moved to the U.S. in 1975 and graduated from Los Altos High School in Hacienda Heights, California, as Valedictorian. She went to college at the University of California in Irvine, majoring in biology. After obtaining her M.D. at Loyola University in Maywood, Illinois, she completed an internal medicine internship and one year of medical residency at Northwestern University in Chicago. She was voted Intern of the Year in 1996.

Kristie Richards, M.D. was born in Ann Arbor, Michigan. She graduated from La Jolla High School in La Jolla, California. After majoring in international relations at Stanford University, she received her M.D. degree at Case Western Reserve University in Cleveland, Ohio. She then completed a pediatric internship at Rainbow Babies' and Children's Hospital in Cleveland, Ohio.

Sara Stein, M.D. grew up in Santa Fe, New Mexico. She received her B.A. in biology from Haverford College, Haverford, Pennsylvania, and her M.D. from Albert Einstein College of Medicine in New York. She then completed her pediatric internship and residency at the Floating Hospital for Children at New England Medical Center in Boston, Massachusetts.

Rush-Presbyterian-St. Luke's Medical Center

Ellen Cunningham, M.D. received her B.A. from Creighton University in Omaha, Nebraska, and her M.D. from Loyola University in Maywood, Illinois.

University of Chicago

Samantha Conrad, M.D. grew up in Ft. Lauderdale, Florida. She received her B.A. from the University of Wisconsin and her M.D. from the University of Florida. She completed her internship at Northwestern University in internal medicine. She lives with her husband (a writer) and her dog in Lincoln Park.

Laryssa Dragan, M.D. completed a pharmacy degree at St. John's University, then went on to complete her M.D. at the State University of New York. After an internal medicine internship at Greenwich Hospital, she arrived in Chicago to begin her dermatology training.

Hilary Diamond Mandel, M.D. received her B.A. from New York University and her M.D. from SUNY Brooklyn. After her internship at The Presbyterian Hospital, she completed her dermatology residency at Cook County Hospital. She is currently the dermatopathology fellow at the University of Chicago. She will join her husband in Kansas City upon completion of her fellowship.

University of Illinois

Stephen Ho, M.D. received his B.S. in biology from UCLA. He earned his M.D. from the University of Chicago and completed his internal medicine internship at the University of Utah.

John Kwon, M.D. received his undergraduate degree from Northwestern University. He earned his M.D. from Northwestern University and completed an internship at Evanston Hospital.

Janet Wong, M.D. received her undergraduate degree from Princeton University and M.A. from Columbia University. She earned her M.D. from the University of Illinois College of Medicine and completed an internship in internal medicine at Evanston Hospital in Evanston, Illinois.

William Allen Pusey, M.D.

William Allen Pusey was one of the founders of the Chicago Dermatological Society, its president for three terms and always one of its staunchest supporters. Dr. Pusey was born December 1, 1865, in Elizabethtown, Kentucky. He obtained his Bachelor and Master of Arts degrees from Vanderbilt University. The M.D. degree from the University Medical College at New York University was awarded to Dr. Pusey at the age of 23. Several years after assuming his father's general practice in Elizabethtown, Dr. Pusey studied dermatology in Chicago and in Europe. In 1893 he established himself as a dermatologist in Chicago.

Soon he became associated with the College of Physicians and Surgeons where he was named professor of Dermatology. As head of the Department of Dermatology, Dr. Pusey lectured and held clinics there for 20 years. In 1896 he became Executive Secretary of the College and, in part due to his efforts, the College was annexed by the University of Illinois.

Following the opening of his office, Dr. Pusey established a laboratory where he compounded and dispensed medicines to his patients. Ointments and lotions for treatment required skill in their preparation. Pusey noted, "An ointment depends as much upon who makes it as a biscuit." He developed calamine liniment, epilating wax, "boro" ointment and modifications of Unna's oxide-gelatin dressing. His office was located at 7 West Madison Street. In 1964 I did a preceptorship with Dr. Samuel Bluefarb and Dr. Leonard Weber, an associate in practice with Dr. Pusey, in this office. The laboratory and furniture were the same as when Dr. Pusey practiced there.

The Chicago Dermatological Society was founded in 1901 as a clinical society whose purpose was to exhibit and discuss cases. Many early meetings of the CDS were held in Dr. Pusey's office. Dr. Henry Michelson, in his president's address, described Dr. Pusey's position at a CDS meeting like a respected chief at a council meeting of a tribe. Alone or with Dr. Oliver Ormsby, Dr. Pusey automatically assumed the position of chairman. A discussion that did not have their approval either by word or look was regretted by the speaker. Dr. Pusey's discussions at the CDS meetings were notable for his desire to see dermatological nomenclature and classification simplified, and for his genial humor and common sense. Dr. Pusey had the facility to abruptly halt an irrelevant discussion by some simple statement. The presence of Dr. Pusey drew important dermatologists to the annual CDS meeting. At the annual meeting in 1935, resolutions were presented to Dr. Pusey by members of the CDS as an "appreciative expression" for his faithfulness and influence on the Society.

Dr. Pusey served as President of the Chicago Dermatological Society in 1906, 1917 and 1935. It is indicative of the esteem in which Dr. Pusey held the CDS that he made a bequest establishing an annual dinner. Throughout the years of his association with the CDS, Dr. Pusey realized that the meetings were not merely an assembly of dermatologists gathered to view and discuss cases. In addition, these meetings engendered friendships and a spirit of unity which is the heart of the CDS. The William Allen Pusey Dinner was held annually for the first 75 years of the CDS.

The American Dermatological Association was founded in 1876. Dr. Pusey served as President of the ADA in 1910. Being involved in all areas of medicine, Dr. Pusey was President of the Chicago Medical Society and The Institute of Medicine of Chicago and was associated with the Chicago Society of Medical History and the Chicago Pathological Society.

During the first decade of this century, the American Medical Association undertook extensive reforms. In 1909 Dr. Pusey was made Chairman of the Committee on the Section on Dermatology and Syphilology to prepare a standard curriculum for a four year course. In 1920, Dr. Pusey became the first editor of the *Archives of Dermatology and Syphilology*, a position he held for 16 years. He did much to raise the standard of medical literature. In 1924 he became President of the American Medical Association. Dr. Pusey is the only dermatologist to hold this office and did much to enhance the image of dermatologists.

Among his more important scientific contributions were his discovery of the therapeutic value of roentgen rays in the treatment of leukemia and mycosis fungoides and the use of carbon dioxide snow for the cryotherapy of superficial skin defects. Books authored by W.A. Pusey include *Roentgen Rays in Therapeutics and Diagnosis*, 1903, *The Principles and Practice of Dermatology*, 1907, *The Care of the Skin and Hair*, 1913, *Syphilis as a Modern Problem*, 1915, *Syphilis: A Brief Treatise for the Intelligent Public*, 1925, *The History of Dermatology*, 1932 and *The History and Epidemiology of Syphilis*, 1933. As judged by his writings, Dr. Pusey's medical interests were the therapeutic use of roentgen rays and the treatment of syphilis. His books are all characterized by simplicity and directness reflecting the character of the author.

Civic duties were not neglected by Dr. Pusey. He spent much time as Chairman of the Chicago Council of Social Agencies, as a member of the Advisory Board of the Cook County Bureau of Public Welfare and as a Director of the Non-Partisan Voters League. Dr. Pusey was appointed a member of the Executive Committee of the Century of Progress Exposition and a Director of the Museum of Science and Industry.

Dr. Pusey had an interest in the history of pioneer days in the middle west and especially of his home state of Kentucky. He wrote *The Wilderness Road to Kentucky* and *A Doctor of the 1870s and 1880s*. Golf was his game and he earned many trophies. A study of Dr. Pusey's avocational activities in the field of history, philosophy and literature reveals a man with extensive knowledge of many subjects other than medicine and of refined, cultured and scholarly tastes. Dr. Pusey once told a friend, "The main satisfaction of life comes from hard work one enjoys." Dr. Pusey died August 29, 1940, but his great influence has been felt and appreciated by following generations of dermatologists.

AWARDS

Society Research Award

The Chicago Dermatological Society, through its research and education fund, will accept grant applications for clinical or laboratory research. Research must be conducted in the United States and the applicant must be a regular member of the Chicago Dermatological Society. Also eligible are residents in training and fellows, as well as Ph.D. degree-holders whose major appointment is in an academic dermatology department. Applicants in the latter three categories who are not members of the Chicago Dermatological Society must be sponsored by a dermatology departmental or divisional preceptor who is a regular member of the Society. Only one application per person will be accepted.

The award(s) must be accepted in person by the successful applicant(s). In the event that a recipient is unable to accept the award, an alternate representative, approved in advance by the Society, must personally attend and accept it.

Limited funds are available to initiate clinical and/or laboratory research projects in dermatology. The Chicago Dermatological Society may provide up to \$10,000 in research funds for the next grant year. Applicants for grants are reviewed carefully and awarded on a competitive basis. The maximum period of funding is for one year. These awards cannot be used for payment of salary, indirect costs, or travel. For application forms please call or write to the Society.

ANNOUNCEMENTS

Clinical Research at Northwestern University

The Dermatology Division at Northwestern University is currently completing two clinical trials on patients with atopic dermatitis. Kenneth Gordon, M.D. and Dennis West, Ph.D. are the principal investigators.

1. Treatment with topical tacrolimus (FK 506) or triamcinolone ointment (no placebo) for 3 weeks (double blind study)
 - Male or female at least 18 years old
 - Acute flare with at least 2 target lesion areas of 50 cm² each
 - 3 skin biopsies and 3 blood draws (each are 2 weeks apart)
 - No concurrent therapy except emollients
 - \$300 payment to subjects upon completion
2. Treatment with topical clobetasol solution or vehicle for 2 weeks (double blind study)
 - Male or female at least 18 years old
 - Active involvement up to 20% of body surface with at least one 25 cm² target lesion area that is not located on face, hands, or feet
 - No blood or biopsy specimens to be taken
 - No concurrent therapy except emollients
 - Standardized photography will be done
 - \$100 payment to subjects upon completion

If you are interested in referring any patients, please call Andrea at (312) 503-3901 or (312) 908-1503.

Clinical Research at Children's Memorial Hospital

If you have **adult patients** (16 years and up) with moderate to severe atopic dermatitis who would like to try tacrolimus (topical FK 506), please call Kim Wolfe at (773) 880-6366. Patients can be enrolled in Chicago or north suburban locations for a 3 month study, followed by a 1 year open label trial. No skin biopsies are required, but patients will have blood drawn. Concurrent therapy will be allowed.

IN PASSING

Theodore D. Arlook, M.D. (1910-1997)

Dr. Theodore D. Arlook died on February 22, 1997, at his home in Elkhart, Indiana. He was born in Boston, Massachusetts, and graduated from Indiana University Medical School. He served in World War II as a first lieutenant and army physician at the 10th Evacuation Hospital in Fort Knox, Kentucky, and then as a captain in New Guinea.

Dr. Arlook worked as a general practitioner from 1937 until 1941. After studying dermatology at the University of Southern California and serving a two year residency in Indianapolis, Indiana, he opened his practice in Elkhart in 1950. He practiced there until his retirement in 1991.

Dr. Arlook was a member of the Christiana Creek Country Club, Noah Worcester Dermatological Society, American Medical Association, American Academy of Dermatology, Indiana State Medical Society, Indiana Jewish Historical Society, and Indiana Sheriffs Association. He is survived by his sister Natalie Arlook of Elkhart.

Raymond Handler, M.D.

1998 MIDWEST CLINICAL CONFERENCE

The 54th annual Midwest Clinical Conference, sponsored by the Chicago Medical Society, will take place on February 20-22, 1998, at Navy Pier. The conference is geared toward primary care physicians. Numerous specialty societies contribute programs and speakers. The Chicago Dermatological Society will present its program on Sunday, February 22, from 8:00 am to noon. The speakers are the following:

8:00-8:45 a.m.

Common Skin Disorders

Debra Bakal, M.D.

8:45-9:30 a.m.

Benign and Malignant Neoplasms of the Skin

Gisela J. Yingst, M.D.

9:30-9:45 a.m.

Intermission to view exhibits

9:45 -10:45 a.m.

Cutaneous Manifestations of HIV/AIDS

Julie Anne Moore, M.D.

10:45- 11:45 a.m.

Neonatal and Pediatric Dermatology

Anthony J. Mancini, M.D.

The program director and moderator is Fern P. Nelson, M.D.

The President

continued from page 1

and Dr. Jeffrey Draluck. Dr. Silver is an excellent clinician with a great business sense. He still works a 12 hour day, and hardly ever gets tired. Dr. Draluck and I attend the pediatric dermatology clinic and teach the basic dermatopathology course at Cook County every Wednesday. I have learned much from all of my associates, who bring different career histories and influences and different generational backgrounds to the daily practice.

I continue to attend clinics and teach at Cook County Hospital, which I have done since 1976. Dr. Darryl Bronson and Dr. Kathleen Remlinger are colleagues whose knowledge is exceeded only by their wise application of it. I try to keep up with the residents and teach them the things I have learned from my experiences. What I feel is most important is to instill in the residents a sense of enjoyment and appreciation for the study of dermatology and a sensitivity to the patients. It is in this way I feel I can carry on the finest traditions of medicine that have been passed on to me by those influences I've mentioned.

Finally, I would like to say that my wife Eileen and my two sons, Steven and Howard, are unique and inspirational people. As many of you know, my two boys are autistic. Because of their disability, I have learned never to take even the most minor of life's gifts for granted. Through my wife, Eileen, I have learned that all challenges in life must be accepted with patience, persistence, perseverance and with love.

I'm looking forward to a year of great cases, interesting speakers and to continue the outstanding tradition of the Society.

Bruce Bennin, M.D.
